TotalMedEd Launches Neurological Movement Disorders Web Portal

Portal designed for neurology specialists provides information, research updates, and tools for diagnosis and treatment of neurological movement disorders.

Cary, NC, November XX, 2010 -- A newly launched web portal for neurology specialists provides comprehensive and timely information on blepharospasm, cervical dystonia, and other neurological movement disorders in a community or practice format.

The new portal, developed by TCL Institute, provides interactive continuing medical education activities in neurology, helpful patient tools, and resources to help practitioners treat patients with neurological disorders. Neurology specialists can get the latest neurology news and updates on neurological research, dystonia treatment, causes of dystonia, and other nervous disorders.

As an expansion of the TotalMedEd online CME offerings, the dedicated neurology portal connects specialists with free, quality, online neurology CME. The evidence-based activities feature the freshest data presented at conferences and in the literature. Healthcare professionals can learn via online E-Cases or earn CME credits on-the-go via TME Mobile. Dinner events, teleconferences, and live events are other ways TotalMedEd enables practitioners to learn in a way that suits their professional needs and lifestyle.

TotalMedEd.com is a resource of TCL Institute, a medical education company offering hundreds of CME activities each year in more than 20 specialties and subspecialties of medicine. "TME Mobile", a medical education application for Apple iPhone® and iPod Touch®, launched in July 2010 offers a variety of innovative, practical educational options for physicians and other health care providers seeking convenient CME credit.

About TotalMedEd.com

TotalMedEd.com and TCL Institute seek to provide the highest quality medical education programs to physicians and other health care providers with the goal of improving patient care and clinical outcomes for their patients. Our key values include a strong commitment to innovation, education, responsiveness, relationship development, superior service, and integrity. We maintain a complete understanding of the ACCME Essential Areas and policies and are committed to following them in all of our medical education initiatives.
